

REDUCING THE RISK OF FIRE INSIDE YOUR HOME

THE TOXIC TRUTH ABOUT SMOKING INSIDE YOUR HOME

in partnership with

IF YOU SMOKE IN YOUR HOME, OVER 250 POISONOUS CHEMICALS INCLUDING ARSENIC AND CYANIDE LINGER ON EVERYTHING YOUR FAMILY TOUCHES

When you smoke inside, poisonous chemicals such as cyanide, carbon monoxide and many others linger on everything including carpets, bed linen and even your children's toys.

These toxins can make their way around your home settling on surfaces and lingering for weeks after you've finished your cigarette.

By smoking inside your home, poisonous chemicals from cigarette smoke can harm the health of your family.

TAKING IT RIGHT OUTSIDE IS THE BEST WAY TO KEEP YOUR HOME SMOKEFREE

Many smokers think that by smoking near an open window or door, smoking under an extractor fan, using air purifiers and air fresheners, or simply smoking less often, will protect their families from the toxins of cigarette smoke.

This is not the case. Taking it right outside is the best way to protect your family and keep your home smokefree.

EVERY 3 DAYS SOMEBODY DIES FROM A FIRE STARTED BY A CIGARETTE

Don't let this happen to one of your family. Smoking in your home can dramatically increase the risk of a fire. Leaving lit cigarettes unattended, smoking in bed, smoking under the influence of alcohol or whilst taking prescription medication can all lead to a fire in the home. When you have finished smoking, make sure you put your cigarette out properly, using a suitable ashtray.

PROTECT YOUR FAMILY TAKE THE SMOKE OUTSIDE

The best way to protect your family from the dangers of smoking inside the home is by choosing to smoke outside.

Not only are you drastically reducing the risk of a fire in the home, but you are also providing a cleaner, healthier living environment for your loved ones.
